

WHY CHOOSE US?

FOR OUR PRODUCTS AND OUR PRINCIPLES

Our ethos: to create products that benefit peoples' lives and are produced in a way that is ethical, sustainable and socially responsible.

Our values: Empower – Passion – Quality – Service.

ERGONOMICS

We adhere to this study of designing chairs to fit the human body—to optimise well-being and overall human system performance. A number of our chairs have either been endorsed by the ergonomics standards authority or designed along these principles.

ISO STANDARDS + CERTIFICATIONS

Our current awarded certifications include: **ISO 9001** (design and manufacturing), **ISO 18001** (health and safety), **ISO 14001** (environmental management), **EN 1335-1** (dimensioning of furniture), **EN 1335-2** (product safety and testing) and **BS 3044** (ergonomic principles).

The Moody International Group is a worldwide technical services organisation dedicated to reducing risks by providing regular technical inspection services. We undergo biannual audits by Intertek (worldwide group of testing labs/certifications) according to UKAS' (United Kingdom Accreditation Service) manufacturing standards.

SUSTAINABILITY: GREEN DESIGN

Green design in product development incorporates the term **Design for Environment (DfE)**—which describes techniques used to design products with consideration for their environmental impact. We strive to use components that are recyclable after the product's life cycle—as well as longer-lasting and more functional due to the use of precision tooling that governs their production. Our components also include the use of non-toxic & recycled raw materials which require less energy to process.

GREEN MANUFACTURING

A method for manufacturing that minimises waste and pollution. These goals are often achieved through product and process design. The basic characteristics are using less consumption of natural resources; less energy, gas and toxic materials in production, and ultimately less waste from the manufacturing process.

Since 2004 we have been working hard to create and support the economic, environmental and social conditions for a better and more sustainable world. We do this by reducing our environmental load and maintaining our environmental goals through bench-marked performance targets, audits and reports. We make every effort to continually improve our technology/processes in line with health/environmental shifts and increase expectations of our supply chain partners.

GREEN SUPPLY CHAIN

To be successful, green products require a green supply chain. Supply chains involve everything from the purchase of production materials to the delivery of finished products to the customer.

a better world
